

Case Study – In home audio – all round

Overview

Integrated multi-zone domestic
Feonic sound system - Singapore

Product

F1.3 audio drives

Designer/Installer

Feonic (SEA) Distribution Pte Ltd
www.feonicsingapore.com

Feonic Singapore was contracted to design, implement, install and commission a multi zone piped in music system for a new build residential property in Singapore. The multi zone system consists of eight Feonic audio drives integrated behind the walls on the ground floor, two under the outdoor decking, four in the main hall ceiling and two more for the outdoor porch area. The second floor required four drives above the hall ceiling, two in the master bedroom and a couple more in the walk in wardrobe

The top floor had four drives in the general area, two in the cabinets and two more in the lounge area ceiling.

“We were really happy with the install and the wooden strip flooring was amazing - almost magical to say the least”.
