The Feonic F1.1/F1.2 drives have been used to provide a state of the art home theatre experience that places you in the music via hidden speakers without tearing your walls apart. Our house is now filled with music that you feel a part of and watching movies is a full, enriching experience with a surround soundtrack and effects you can feel.

The Feonic combination F1.1/F1.2 drives installed in our lounge room cannot be seen, yet they did not require us to rip apart our walls like other speaker systems that claim to be hidden do. The Feonic drives are completely concealed.

“We constantly receive comments from amazed visitors and friends who are blown away by the experience of walking into a room where the sound encompasses each and everyone one of you. We would highly recommend a Feonic drive installation in any music or movie lovers home. A sound experience like no other”.
