Foxy's Roast & Grill in Hove, Brighton is an intimate restaurant designed around the theatrics of an open kitchen, where the diners watch whilst their food is prepared.

In this environment where space is limited and hygiene is of importance, **Feonic invisible audio drives** were easily installed in the ceiling void of the bar area. Being able to conceal the audio drives without the need for holes, means the area is completely free of speakers, addressing the important issues of design, hygiene and space.

Thanks to the patented design of the Feonic technology, the system delivers a unique even sound throughout the space; without the usual loud areas for diners sitting directly underneath, as experienced with traditional speaker technology

"Space at Foxy's is at a real premium and our designers clean lines of the bar and stepped ceiling, with tinted reflective walls, simply would not work using traditional speakers around the place."

We spent ages looking for a truly invisible, 100% hygienic solution that delivered a high quality sound and was easy to install.

Feonic's new product lifts the total immersive experience to an awesome level – I just love it!"
